a first display driver for driving the first liquid crystal cell in a first and second direction;

a second display driver for driving the second liquid crystal cell in a first and second direction; and

means for synchronizing the drivers; and

wherein the first and second display drivers are positioned at opposed sides of the LCD.

---

3. (Amended) A display device as claimed in Claim 1, wherein the first axis extends in the direction of the height of the LCD.

A1

4. (Amended) A display device as claimed in Claim 1, wherein the first axis extends in the direction of the width of the LCD.

5. (Amended) A display device as claimed in claim 1, wherein the LCD is substantially symmetrical about a bisector.

6. (Amended) A display device as claimed in claim 1, which is substantially symmetrical about a bisector.

7. (Amended) A display device as claimed in Claim 5, wherein the bisector is the first axis.

8. (Amended) A display device as claimed in Claim 5, wherein the bisector is a second axis perpendicular to the first.

A1

9. (Amended) A display arrangement comprising a display device as claimed in claim 1, comprising a connector for connecting display device circuitry to an external element, and an intermediate element for interfacing the display device and the connector.

11. (Amended) A display arrangement as claimed in claim 9, wherein the intermediate element interconnects the first and second drivers for synchronization.

A2

12. (Amended) A display arrangement as claimed in claim 9, wherein the intermediate element is flexible.

13. (Amended) A display arrangement as claimed in claim 12, wherein the intermediate element is a flexible printed circuit (FPC) foil.

14. (Amended) A display arrangement as claimed in claim 9, wherein the intermediate display element comprises display device power control circuitry.

15. (Amended) A display arrangement as claimed in claim 9, wherein the display device further comprises first and second flexible driver supports for supporting the respective first and second drivers.

17. (Amended) A display arrangement as claimed in claim 15, wherein the flexible driver supports flex to contact the LCD and the intermediate element.

A3

18. (Amended) A display module comprising an arrangement as claimed in claim 1.

19. (Amended) A portable device comprising a display device as claimed in claim 1.

A4

27. A display device comprising:

a liquid crystal display (LCD) comprising first and second liquid crystal cells positioned along a first axis of the display device;

a first display driver for driving the first liquid crystal cell in a first and second direction;

a second display driver for driving the second liquid crystal cell in a first and second direction; and

means for synchronizing the drivers; and

wherein the first and second display drivers are positioned at opposed sides of the LCD.
